

M4SOLUTIONS

FROM IDEAS TO REALITY

HDMI Cable Tester

BENEFITS

- › End-to-end HDBaseT and HDMI cable testing and diagnostics
- › Ensures compliance with HDMI standard/high-speed bandwidth requirements
- › Quick, simplified HDMI cable troubleshooting
- › Expands your testing coverage, saving time and money
- › Verifies support for HDMI 2.x Ethernet and HEAC

FEATURES

- › Comprehensive testing of HDMI cable wiring
- › Checks cable readiness and 18 Gbps bandwidth support
- › Fast warranty report generation in PDF format
- › Checks cable readiness for HDMI 2.x specifications

HDMI Cable Tester

HDMI Cable Tester

The MS-TestPro, MSolutions' industry-leading HDBaseT testing device, offers an end-to-end ProAV testing solution with its efficient, time-saving HDMI cable testing modules.

The HDMI module enables installers to easily evaluate cabling compatibility with the HDMI standard – including bandwidths (18/9/4.5 Gbps), resolutions (HDR, UHD, HD), and cable wiring quality.

HDMI Testing Results

DID YOU KNOW?

Some HDMI cables are supplied with missing or shorted wires. You won't notice the difference... until you try streaming 4K!

With the MS-TestPro HDMI modules, you'll catch the problem immediately, and not in a post-installation service call.

The MS-TestPro HDMI modules perform physical layer quality tests on each of the cable's conductors and shielding, providing instant feedback on missing or defective wiring.

Just attach the HDMI modules to both ends of an HDMI cable, and gain instant access to crucial cable-quality data:

- Check the presence of each of the 19 HDMI-standard conductors
- Tests the ability of the cable to support an array of HDMI bandwidth requirements.
- Ensures that none of the cable's conductors are shorted or missing
- Measures the gauge (AWG) of each of the conductors.

The MS-TestPro and the HDMI module offer a comprehensive ProAV testing solution, easing troubleshooting and reducing installation time – putting you in control.
